

I support xm radio. I do not support any attempt to stop xm radio from giving instant weather and road condition reports. As a professional Truck Driver I need these reports to safely transport the nations goods and services through out the United States of America. With this service I can get reports of accident and Weather related news hundreds of miles before I reach the listening service most local am/fm stations provide. Plus xm gives us very detailed information so that we can alter our routes to avoid being caught up in these situations. This not only keeps the nations goods moving in a timely and safe manner but helps law inforcement and emergency personel do what is necessary to clear up the situation and better serve the motoring public. Xm radio is providing an essential and needed service to our nation. With the increasing threat of terrorist enemys I would think Congress and the FCC would want to support a revolutionary service to the Country that xm is offering its subscribers traveling the nations highways. I oppose this petition by NAB 04-160
